- 3. Seconds hand
- 4. Date display

5. Crown with 3 positions

- I. Running position and manual winding.
- II. Quick correction of date and day
- III. Time setting, optional stop-second

WATCH SETTINGS

Usage / Settings

Models with a screwed crown

To ensure that they remain water-resistant, some models are fitted with a screwed crown. Before proceeding to setting the time or date*, you must first unscrew the crown before pulling it out to its outer positions.

Important: After each operation, you must always screw the crown back down to ensure that your watch remains water-resistant

Setting the time

Carefully pull the crown into position **III** (3); the watch stops at this point. Turn the crown forwards or backwards until the hands display the correct time.

Advice on how to synchronise your watch

To synchronise the seconds hand (3) with an official time signal (radio/TV/Internet), pull the crown out into position **III** when the seconds hand reaches the 60 second (or 12 o'clock) position. This then stops. At the tone, press the crown back into position **I** (and tighten it down if you have a model with a screwed crown).

Rapid correction of the date*

Important: Do not set the date* between 10pm and 2 am (the movement is in the process of changing date at these times), if your model have a screwed crown.

Pull the crown out into position **II** and turn it backwards until the correct date (4) is displayed. During this operation, your watch will continue to function normally, so you will not need to alter the time.

Note: When setting the time, if the chronometer is engaged, the hand on the 12-hour counter will turn together with the hour hand of the watch.

Winding

Manual winding is necessary if you have not been wearing your watch for some considerable period of time. To restart it, you only need to turn the crown a few times (clockwise), or to tilt your watch from side to side a few times. To restore the power reserve of your watch, you need to turn the crown about 30 times (clockwise).

Whenever you wear your watch, the automatic mechanism is wound every time you move your wrist.

Care and maintenance

We would advise you to clean your watch regularly (except for the leather strap) using a soft cloth and warm soapy water. After immersion in salty water, rinse it in fresh water and leave it to dry completely.

Do not leave it anywhere where it might be subjected to major variation in temperature or humidity, in direct sunlight or near strong magnetic fields.

To benefit from the highest standards of service and to ensure your guarantee remains in force, please always contact an authorised high-end watch dealer.

The high-quality mechanism of your HAUGER watch will give you complete satisfaction for many years provided that you take proper care of it. However, we would advise you to have your watch inspected every 3 to 4 years by an authorised high-end watch dealer.
